SYNOPSIS REPORT

Event Planner and Approval System

Project Guide Details

Project Guide Name: Ms. Saumya

Designation: Assistant Professor

Department: School of Computer and System Sciences

Contact Number: +91 60063 97349

Email ID: saumya.s@jnujaipur.ac.in

Signature: _____

Project Team Leader (Student)

Name: Kashif Shaikh

Enrollment No.: R42328

Email ID: kashfshaikh2002@gmail.com

Contact Number: +91 84339 56384

Other Project Team Members

Name: Aditya Gond

Enrollment No.: R44057

Email ID: r44057.aditya@jnujaipur.ac.in

Contact Number: +91 91379 93044

Name: Yaduvansh Singh Ranawat

Enrollment No.: R42892

Email ID: r42892.yaduvansh@jnujaipur.ac.in

Contact Number: +91 63788 93208

1. Abstract / Objectives

Abstract

The **Event Planner and Approval System** is a web-based application developed to digitize and streamline institutional event management workflows. The system replaces manual proposal submission and approval processes with a structured digital platform that supports event creation, multi-level approvals, status tracking, and secure database management.

Built using a three-tier architecture model, the system incorporates role-based access control to ensure secure workflow handling. The project demonstrates applied concepts of workflow automation, database modeling, and access governance in an academic administrative environment.

Objectives

- To digitize the event proposal and approval process.
- To implement a structured multi-level approval workflow.
- To provide secure role-based authentication and authorization.
- To maintain centralized event and approval records.
- To ensure transparency through structured tracking and audit logging.
- To leverage AI-assisted development tools for research, debugging, and documentation support.

---

2. Literature Survey (Existing System / Proposed System)

Existing System

Traditional institutional event approval systems are largely manual and paper-based. Proposals are physically routed across departments, resulting in:

- Delays in approvals
- Lack of real-time tracking
- Poor record management
- Absence of structured audit trails
- Limited administrative analytics

These limitations reduce transparency and operational efficiency.

Proposed System

The proposed Event Planner and Approval System introduces:

- Online event submission and modification
- Multi-level approval mechanism
- Real-time status tracking

- Role-based access control (RBAC)
- Database-backed audit logging
- Structured administrative monitoring

Additionally, AI-assisted tools were used during the development phase for workflow refinement, debugging guidance, and documentation structuring. However, system design, architecture modeling, database schema creation, and implementation decisions were independently developed and validated by the student.

---

3. Tools / Hardware / Software Required

Hardware Requirements

- Personal Computer or Laptop
- Minimum 4GB RAM (8GB recommended)
- Stable Internet Connectivity

Software Requirements

- Operating System: Windows / Linux
- Programming Language: Python
- Framework: Flask
- Database: SQLite / MySQL
- Frontend Technologies: HTML, CSS, JavaScript
- Version Control: Git
- Web Browser: Chrome / Firefox
- AI-Assisted Development Tools: AI-based research and debugging support systems

---

4. Base Paper Details

The project is conceptually based on research areas including:

- Workflow Management Systems
- Role-Based Access Control (RBAC) Models
- Web Application Architecture
- Institutional Management Information Systems
- AI-assisted Software Development Practices

The theoretical foundation aligns with established research in structured workflow automation and secure access control models in distributed systems.
